OPTICAL ADHESIVES

OP-21 & OP-21G Product Data Sheet

The required intensity and cure time should be determined during the initial process validation stage. Factors that should be considered during process validation which can effect the adhesive cure rate and depth of cure include part geometry, bond-gap size, percent light transmittance through the substrate at 365 nm and/or 436 nm, distance from the light source to the adhesive bond are. UV and visible light intensity and spectral output of the light source, the desired margin of safety to be built into the process, etc.
